

PUBLIC SERVICE ANNOUNCEMENT

Harmful Algal Bloom Advisory:

The Southeast Alaska Tribal Toxins (SEATT) partnership has been collecting phytoplankton samples throughout southeast Alaska to monitor for plankton species that can produce toxins and cause human health effects, specifically paralytic shellfish poisoning (PSP). Recent samples on 6/1/2016 confirmed elevated levels of *Alexandrium*, the phytoplankton species that produces saxtoxins causing PSP, has been observed at the following locations and shellfish from these sites should not be harvested at this time.

Location	Beach
Petersburg	Sandy Beach
Juneau	Auke Bay, Amalga Harbor, Eagle Beach, Pt Louisa
Craig	Cloud 9, Graveyard
Sitka	Starrigavan
Klawock	Boat Ramp

Sampling updates will be available on the Southeast Alaska Tribal Ocean Research website (www.seator.org)

Any additional questions please contact STAERL at 907-747-7395.
